PROFESSIONAL SUMMARY

Full Stack Developer and final-year Computer Science Engineering student (CGPA: 7.31/10, APCOER, 2026) with hands-on experience building and shipping web and mobile applications end to end. Independently architected MahaYatri — a multi-platform AI travel application integrating AI-powered itinerary planning, payments, and live-location safety features. Built core production modules for an enterprise LMS platform at Automatic Infotech. Strong fundamentals in relational data modeling, REST API integration, and object-oriented programming, with growing expertise in system design and AI-assisted development workflows.

PUBLICATIONS

Kedar Jadhav et al., "Mahayatri – A Travel Guide Application," DY Patil College International Conference, 2026.
[Accepted]

TECHNICAL SKILLS

Languages: Java, Python, C++, TypeScript, JavaScript, HTML5, CSS3, SQL

Frontend: React.js, Flutter, WebGL, Three.js, Spline 3D, Responsive UI Design

Backend & APIs: Node.js, REST API Design & Integration, Moodle LMS

Databases: MySQL, Firebase, Supabase, Relational Data Modeling, Schema Design

AI & ML: LLMs, Retrieval-Augmented Generation (RAG), Prompt Engineering, OCR (Tesseract), Gemini API, Vector Databases

Security: Vulnerability Assessment, CVSS Scoring, Defect Lifecycle Documentation

Tools & Practices: Git, GitHub, VS Code, Postman, Agile & Scrum, OOP, Debugging, System Design (Learning), Claude Code, Gemini CLI

PROFESSIONAL EXPERIENCE

Automatic Infotech Jun 2024 – Feb 2025

Software Development Intern Pune, India

- Contributed as part of a development team to build a self-paced employee training platform on the Moodle LMS framework using HTML5, CSS3, and JavaScript, replacing a costly and inflexible third-party tool.
- Personally, built the certificate generation module and an employee ID management system, alongside platform features supporting lectures, quizzes, and assessments.
- Integrated AntigraVity, Gemini CLI, and Claude Code into the daily development workflow to accelerate coding and debugging cycles.

Freelance Web Developer Mar 2025 – Present

Self-Employed Pune, India

- Delivered 5 client websites end-to-end — 3 responsive business platforms (HTML5, CSS3, React.js) and 2 immersive 3D web experiences (MERN stack, WebGL, Three.js, Spline 3D).

KEY PROJECTS & RESEARCH

MahaYatri – AI-Powered Travel & Guide Booking Platform | Solo Oct 2025 – Present

- Architected a 12-table relational database schema covering tourist profiles, local-guide bookings, vendor listings, and AI-generated itineraries — supporting full transactional data integrity.

- Built the web application in TypeScript and Firebase (v1), then re-engineered the backend on Supabase, React.js, and Node.js for improved scalability and maintainability.
- Integrated 4 REST APIs: Gemini API (prompt-engineered AI itinerary planner), Razorpay (payment gateway), Google Maps (live SOS — location sharing and nearest-help lookup), and Supabase (backend services).
- Extended the platform into a cross-platform Flutter mobile app (62MB) with full feature parity across web and mobile.
- Co-authored research paper accepted at DY Patil College International Conference 2026: "MahaYatri – A Travel Guide Application."

Urban Carbon Footprint Mapping – Automation Tool | Solo Mar 2026 – Apr 2026

- Built a Python-based web tool that automated ward-level carbon footprint calculations defined in a published research paper, eliminating a fully manual per-location formula process.
- Designed an interactive map-click interface powered by government data sources, cutting calculation time by approximately 5 minutes per location versus the manual method.

AI Handwritten Notes Summarizer – Inter-College GenAI Hackathon | Solo Feb 2026

- Engineered a fully local AI pipeline — Tesseract OCR for text extraction, local Llama/Qwen LLM for processing, and Retrieval-Augmented Generation (RAG) for context-aware summarization — achieving ~85% OCR accuracy with zero cloud dependency.
- Placed 11th out of 58 teams at an inter-college GenAI Hackathon, delivering a fully functional prototype within 6 hours.

COMPETITIONS & ACHIEVEMENTS

BOSS OS Bug Bounty – C-DAC | Team Hexacon2026

- Identified and documented 12 security defects across 4 problem statements in a 36-hour competitive vulnerability assessment of BOSS GNU/Linux 11 (C-DAC), including sudoers misconfigurations and a TOCTOU race condition.
- Produced CVSS-scored vulnerability reports with full reproduction steps, impact analysis, and remediation recommendations — structured to professional defect-lifecycle documentation standards.

FinSpark'26 – Banking Cybersecurity Innovation Hackathon | Team Hexacon2026

- Shortlisted among Top 20 finalist teams nationally at FinSpark'26 (Bank of Maharashtra & Department of Financial Services) for a banking cybersecurity prototype recognized for real-world security relevance.

LEADERSHIP & INITIATIVE

ISTE (APCOER) – Secretary Jun 2024 – Jun 2025

- Directed a cross-functional student team to plan and execute 5+ large-scale technical events, scaling participation by 30% year-over-year through targeted outreach and resource delegation.

ISTE (APCOER) – Editor Jun 2023 – Jun 2024

- Designed high-fidelity visual graphics, posters, and isometric UI/UX components across 5+ institutional campaigns under strict marketing deadlines.

EDUCATION & CERTIFICATIONS

Anantrao Pawar College of Engineering and Research (APCOER) Expected Jun 2026

Bachelor of Engineering – Computer Science & Engineering | CGPA: 7.31/10 Pune, India

Muktangan English School & Jr. College Jun 2020 – May 2022

Higher Secondary Certificate (HSC) Pune, India

Certifications: Cybersecurity & Web Deployment (Eduskills / Palo Alto Networks) | AI-ML Foundations (Google)

LANGUAGES

English (Fluent) | Hindi (Native) | Marathi (Native) | German (A1 – Beginner)
